

DANIEL MOFOPEFOLUWA ADEGOKE

Famagusta, Cyprus · +90 548 854 9642 · mofopeadegoke@gmail.com · github.com/mofopeadegoke
Open to Relocation (US, EU, UK, Canada, Singapore) & Remote

SUMMARY

Versatile Full-Stack Software Engineer with a proven track record across scalable web architecture, AI systems integration, and low-level hardware diagnostics. Deeply proficient in React, TypeScript, Python, and C++. Expert in owning product surfaces from end to end—from building self-generating UIs on undocumented C++ engines and integrating generative audio models, to architecting 25+ component enterprise React libraries and scaling independent productivity tools to over 4,000 active users.

TECHNICAL SKILLS

Frontend & Web: React, TypeScript, JavaScript (ES6+), Next.js, React Native, Tailwind CSS, Material-UI, Figma

Backend & Data: Python, Node.js, C++, PHP, REST APIs, SQL (PostgreSQL/MySQL), MongoDB, ETL Pipelines

AI, ML & Vision: Audio Models, Generative AI APIs, YOLOv8-Nano, LPRNet, Morphological Erosion, MCP Servers

Systems & Hardware: OpenSCAD, ESP32/STM32, UART, Linux, Docker, Git, CI/CD, Low-Level Diagnostics

PROFESSIONAL EXPERIENCE

Ozbul Software <i>Software Developer</i>	Famagusta, Cyprus Mar 2026 – Present
--	---

- Own the end-to-end frontend architecture for 4 production platforms (2 web, 2 mobile) using React and TypeScript, shaping technical direction and ensuring strict cross-platform consistency.
- Architected and actively maintain a shared component library of 25+ reusable, accessible UI elements, accelerating cross-functional feature delivery by an estimated 30% across the engineering organization.
- Collaborate in rapid two-week Agile sprints, participating heavily in Git-based code reviews and advising business stakeholders on architectural tradeoffs prior to feature kickoff.

Technolink Software <i>Software Developer Intern</i>	Remote Jun 2025 – Sep 2025
--	-------------------------------

- Engineered robust REST APIs and scalable data storage pipelines using Python and PHP, creating the backend infrastructure required to power an AI-driven automation system across 2 internal products.
- Configured AI agent workflows using Model Context Protocol (MCP) servers, establishing scalable AI support routing.
- Diagnosed and resolved 10+ critical production bottlenecks in the live data pipeline, optimizing system design patterns to ensure maximum reliability and uptime.

Ozbul Software <i>Software Developer Intern</i>	Remote Jun 2025 – Aug 2025
---	-------------------------------

- Built an enterprise-ready stock management web application end-to-end using React, TypeScript, and C#, owning the project lifecycle from initial scoping to final delivery.
- Delivered 20+ responsive, mobile-first data components, resulting directly in a full-time return offer.

Mensa Philosophical Circle <i>Frontend Developer</i>	Remote Jun 2023 – Dec 2023
--	-------------------------------

- Developed and maintained responsive web interfaces, translating design mockups into functional, accessible frontend code using modern JavaScript frameworks.
- Collaborated with organizational stakeholders to optimize the user experience and ensure cross-browser compatibility.

Learning on the go <i>Frontend Developer</i>	Nigeria Aug 2022 – Nov 2022
--	--------------------------------

- Built responsive, mobile-first educational web interfaces to improve digital accessibility for end-users.
- Focused on client-side performance optimization and clean HTML/CSS/JavaScript architecture to deliver a seamless user experience.

SELECTED PROJECTS

MARK AI Marketing Agent (Python, Audio Models)	<i>Finalist, Construct AI & EMUSoft</i>
---	---

- Engineered core components of MARK, an AI marketing agent leveraging Python and generative audio models to automate dynamic multimedia marketing content.

- Integrated audio processing and model inference pipelines to bridge backend machine learning outputs with user-facing workflows.

SMARTDRIVE / Omniplexus Platform (C++, JavaScript, OpenSCAD)

2026

- Owned the complete software-to-hardware user interface for a distributed robotics platform, engineering the web server and desktop application natively in C++ alongside a dynamic JavaScript web frontend.
- Reverse-engineered the undocumented Gorgon open-source C++ engine to diagnose fatal linker errors, building a self-generating UI layer from scratch that mapped physical device telemetry at runtime.
- Designed functional physical hardware components using OpenSCAD, ensuring tight integration between the parametric physical chassis and the software architecture.

Inscribe Browser Extension (Founder & Solo Developer)

2022 – Present

- Designed, built, and scaled a React/TypeScript productivity tool single-handedly to 4,000+ active installs globally.
- Shipped 5 core modules including local search algorithms, tagging, and multi-format data export (PDF, PNG, Markdown) entirely on the client side without relying on external backends.

Smart Traffic Monitoring & Edge LPR Architecture (Python, YOLOv8, C++)

2025

- Trained and deployed license plate recognition (LPR) models on the edge, integrating LPRNet for character recognition and YOLOv8-Nano for high-speed vehicle detection using 5G Quality on Demand APIs.

C++ Document Scanner & Enhancer (Computer Vision)

2024

- Implemented traditional computer vision algorithms from scratch natively in C++, utilizing morphological erosion and adaptive thresholding to convert poorly lit raw photos into clean binary outputs.

Parametric Gear Generation Library (C++)

2024

- Implemented computational geometry algorithms from first principles to dynamically generate parametric 3D gear models.

EDUCATION

B.Sc. Software Engineering

European University of Lefke

Graduated June 2026

Northern Cyprus

- **Academic Standing:** CGPA 3.81/4.00 — Ranked Top 3 in Department; Top 4 in Faculty.

SELECTED ACHIEVEMENTS

- **Top 0.5% Finalist (Tourism) & Top 0.1% (Robotics):** Teknofest (2025)
- **Top 5% AI Fluency:** Globally ranked engineer on the Calyptus technical platform.
- **Winner:** Codespace x Couchbase Hackathon (2023)
