Summary

Software Engineer with 2+ years owning frontend architecture for production React, React Native and TypeScript apps, with tested code, TanStack Query data layers and a 25+ component design system. Builds REST APIs and AI agent workflows in Python and Node.js, and works below the UI in C++. Founder of Inscribe (4,000+ installs). Top 3 graduate, B.Sc. Software Engineering (CGPA 3.81/4.00).

Technical Skills

Languages: TypeScript, JavaScript (ES6+), Python, C++, C#, SQL, PHP
Frontend: React, React Native, TanStack Query, Material-UI, Tailwind CSS, SCSS, HTML5, CSS3, design systems
Testing & Quality: Vitest, Jest, React Testing Library, web performance optimization, accessibility (WCAG)
Backend & APIs: Node.js, Django, REST API design, JWT authentication, object-oriented design
AI & Systems: AI agents in Python, Model Context Protocol (MCP), computational geometry, low-level C++ UI rendering
Tooling: Git/GitHub, Vite, Webpack, Linux, Agile/Scrum

Experience

Software Developer Mar 2026 – Sept 2026
Ozbul Software *Famagusta, Cyprus*
- Owned frontend architecture for 2 production web apps (React, TypeScript) and 2 production mobile apps (React Native), working with designers and backend developers in two-week Agile sprints and code review.
- Built and maintained a shared library of 25+ reusable, accessible UI components (Material-UI, Tailwind CSS) that other developers built on, removing duplicated styling across the product.
- Wrote Jest unit tests that increased test coverage by 30%, alongside component tests with React Testing Library for the shared library and core user flows.
- Built the apps' server-state layer on TanStack Query for caching and data synchronization with backend APIs.
- Sped up the web and mobile apps with lazy loading, memoization and code splitting, and improved WCAG accessibility.

Software Developer Intern Jun 2025 – Sep 2025
Technolink Software *Remote*
- Built and maintained 10+ JWT-secured REST API endpoints in Python and PHP powering an AI-driven automation system used across 2 internal products.
- Configured AI agent workflows on Model Context Protocol (MCP) servers to route AI support requests.
- Diagnosed and resolved 10+ production issues in a live automation pipeline, tracing each to its root cause.

Software Developer Intern Jun 2025 – Aug 2025
Ozbul Software *Remote*
- Built a stock management web application with a small team using React, TypeScript and C#, working across the frontend and its integration with the C# backend.
- Built 20+ reusable, responsive, mobile-first React and TypeScript components and led a refactor of a legacy monolithic frontend into 10+ modular components, which led directly to a full-time offer.

Frontend Developer Jun 2023 – Dec 2023
Mensa Philosophical Circle *Remote*
- Prototyped and shipped 10+ interactive, accessible web features with React and browser APIs, iterating weekly on member feedback to improve usability.

Projects

Inscribe | *Founder & sole developer; React, TypeScript, Node.js, Vitest* 2022 – Present
- Built and run a productivity browser extension with **4,000+ installs**, maintained solo for 3+ years.
- Shipped tagging, search, export (PDF, PNG, Markdown) and English/Turkish localization, tested with Vitest and React Testing Library.

Omniplexus | *Modular robotics framework; C++, Gorgon engine* 2026
- Owned the self-generating UI layer that builds each device's control panel from its data at runtime, so new hardware modules need no new UI code.
- Fixed crashes and linker errors in an undocumented C++ engine by reading and tracing its source.

Parametric Gear Library | *C++, computational geometry* 2026
- Native C++ library generating 3D gear models from 5 parameters, with involute geometry written from first principles.

Education

European University of Lefke Northern Cyprus
B.Sc. Software Engineering; CGPA 3.81/4.00; ranked Top 3 in department, Top 4 in faculty *Jun 2026*

Achievements

Top 1% Teknofest AI in Aviation (2026) and Robotics (2025); Top 0.5% Teknofest Tourism (2025)
Winner, Codespace x Couchbase Hackathon (2023); Finalist, Construct AI (2024) and EMUSoft (2025)
