SUMMARY

Software Engineer working across frontend, backend, and systems programming. Own frontend architecture for four production applications in React and TypeScript, including a shared component library of 25+ components. Also build in Python – Django apps, a desktop application, and AI agents – and in C++, including a computational-geometry library and a self-generating UI layer on an undocumented engine. Top 3 graduate, B.Sc. Software Engineering, European University of Lefke (CGPA 3.81/4.00).

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, C#, C++, PHP, Java, SQL
Frontend: React, React Native, component libraries & design systems, Material-UI (MUI), Tailwind CSS, SCSS, HTML5, CSS3, responsive & mobile-first design, accessibility
Backend & APIs: Django, REST API design, Authentication (JWT), PHP, Python
Systems & AI: Computational geometry, low-level C++ rendering, native library design, crash & linker diagnosis, AI agent development (Python), AI-assisted development workflows
Tooling: Git/GitHub, Linux command line, Vite, Webpack, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Developer Mar 2026 - Present
Ozbul Software Famagusta, Cyprus

- Own frontend architecture for 2 production web applications (React, TypeScript) and 2 production mobile applications (React Native), keeping design and behavior consistent across both.
- Built and maintain a shared component library of 25+ reusable, accessible UI components (Material-UI, Tailwind CSS) that other developers build their interfaces on top of.
- Work with designers and backend developers in two-week Agile sprints, taking features from design through to production code and participating in code review.

Software Developer Intern Jun 2025 - Sep 2025
Technolink Software (Remote) Remote

- Built and maintained REST API endpoints in Python and PHP powering an AI-driven automation system used across 2 internal products.
- Designed secure RESTful APIs with JWT-based authentication, enabling reliable data exchange between connected services.
- Diagnosed and resolved 10+ production issues in a live automation pipeline, tracing each symptom to its root cause and improving reliability and uptime during the internship's 3-month cycle.

Software Developer Intern Jun 2025 - Aug 2025
Ozbul Software (Remote) Remote

- Built a stock management web application with a small team using TypeScript, React, and C#, contributing across the frontend and integrating it with the C# backend.
- Built and maintained 20+ reusable, responsive, mobile-first components in React and TypeScript for the company's core product – work that led directly to being invited back as a full-time hire.

SELECTED PROJECTS

Omniplexus - Self-Generating UI (Gorgon Engine, C++) 2026

- Built a desktop application with a small team on Gorgon, an open source C++ UI engine with effectively no public documentation; owned the self-generating UI layer, which reads a device's data at runtime and builds its control panel automatically – so a new hardware module never means rewriting UI code.
- Diagnosed and resolved crashes and linker errors by reading the engine's source directly and tracing its internals – no documentation or community answers to fall back on – going from unable to get a build running to proficient with the engine over the course of the project. Public on GitHub.

Inscribe - Browser Extension (Founder & Sole Developer) 2022 - Present

- Designed, built, and have run a React browser extension single-handedly for 3+ years, growing it to **4,000+ installs** by integrating third-party services directly from the client with no backend of my own.
- Shipped 5 core modules including tagging, search, and multi-format export (PDF, PNG, Markdown), plus full English/Turkish localization routing from a single codebase.

Parametric Gear Generation Library (C++)

- Native C++ library generating parametric 3D gear models from 5 configurable parameters, implementing computational geometry algorithms from first principles rather than wrapping an existing package. Public on GitHub.

EDUCATION

B.Sc. Software Engineering Graduated June 2026
European University of Lefke Northern Cyprus

- CGPA: 3.81 / 4.00 – Ranked Top 3, Department of Software Engineering; Top 4, Faculty

SELECTED ACHIEVEMENTS

- **Top 0.1%** (Robotics) & **Top 0.5%** (Tourism), Teknofest • Winner, Codespace x Couchbase Hackathon (2023) • **Top 10%**, MARK AI marketing agent (Python) • Finalist, Construct AI (2024) & EMUSoft (2025)
